# Mental Health - Anxiety

With Professor Barry Carpenter, Professor Cathy Creswell &  
Helen Manley

# Today's learning objectives

- Find out about the latest evidence-base on anxiety in children and young people (including what we know about the impact of the pandemic)
- Build knowledge around what anxiety feels like for children and young people, how it can present itself in school settings, and the impact it has on young people's capacity to learn
- Provide an overview of the principles to support children and young people who have difficulties with anxiety

# How anxiety presents within schools and its impact on school life

## WHY MIGHT CHILDREN BE ANXIOUS IN SCHOOL?

### issues from home

'some children are  
already dealing with so  
much before they even  
come in'

### separating from parent/carer

'saying goodbye can be  
hard for her'

### academic pressures

'exams and tests'

'everything is so  
competitive'

'not coping with the  
work'

### environment

'classrooms can be  
busy, crowded and  
noisy'

### 'social situations can be overwhelming'

### contributing in class

'worrying over what  
teachers and friends  
will think'

'getting things wrong'

### relationships

'friendship problems  
can be really  
upsetting'

'the teacher might  
shout at me'

## WHAT MIGHT ANXIETY LOOK LIKE IN SCHOOL?

frequently being late  
or absent

tummy aches/feeling sick

headaches

frequent toilet  
requests

withdrawal or 'shut  
down'

## WHAT MIGHT ANXIETY LOOK LIKE IN SCHOOL?

crying

need for constant reassurance

behavioural outbursts

refusal

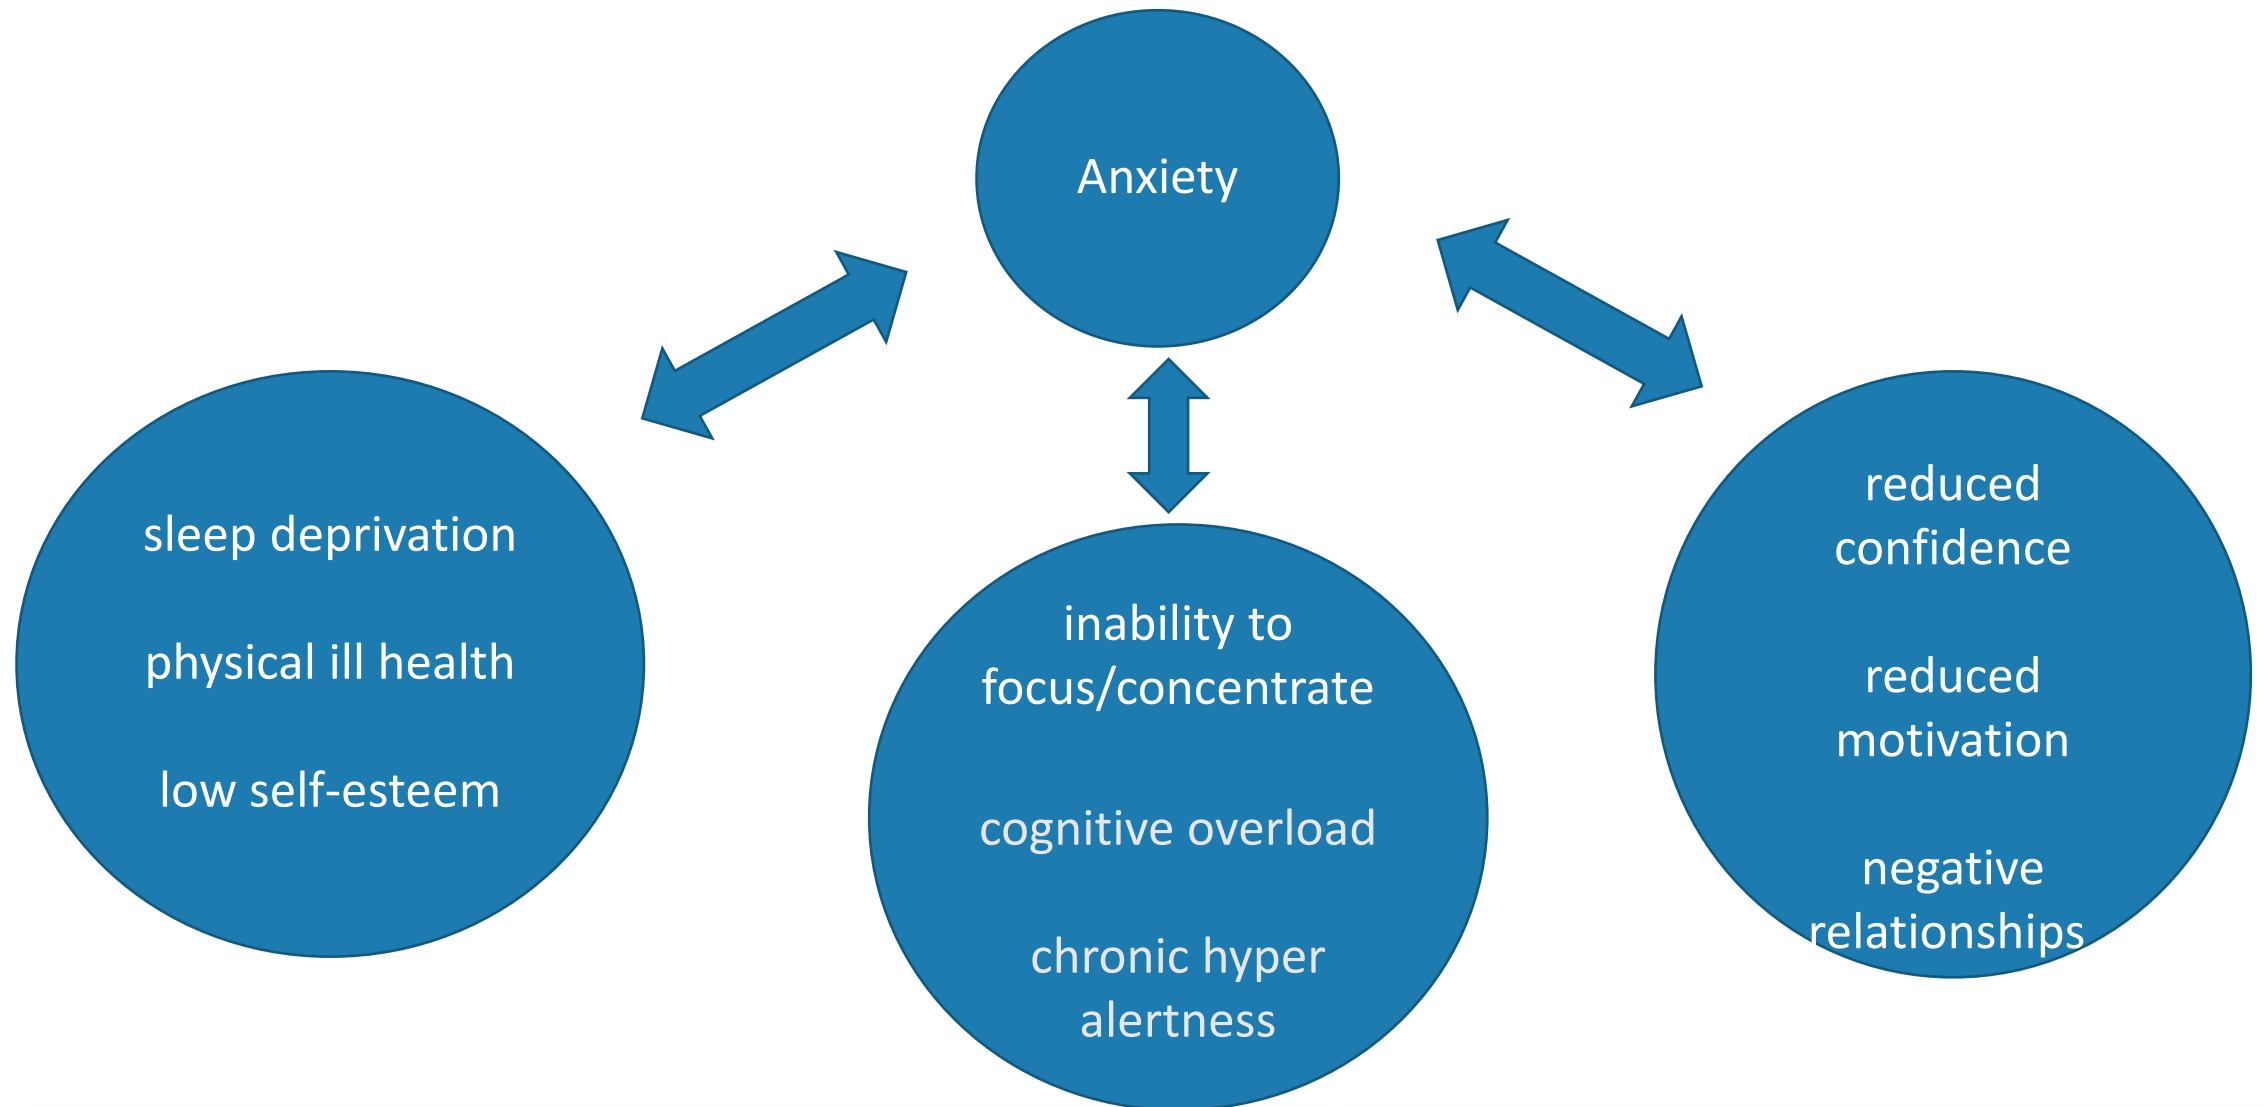

worry over  
lessons/events in  
the day

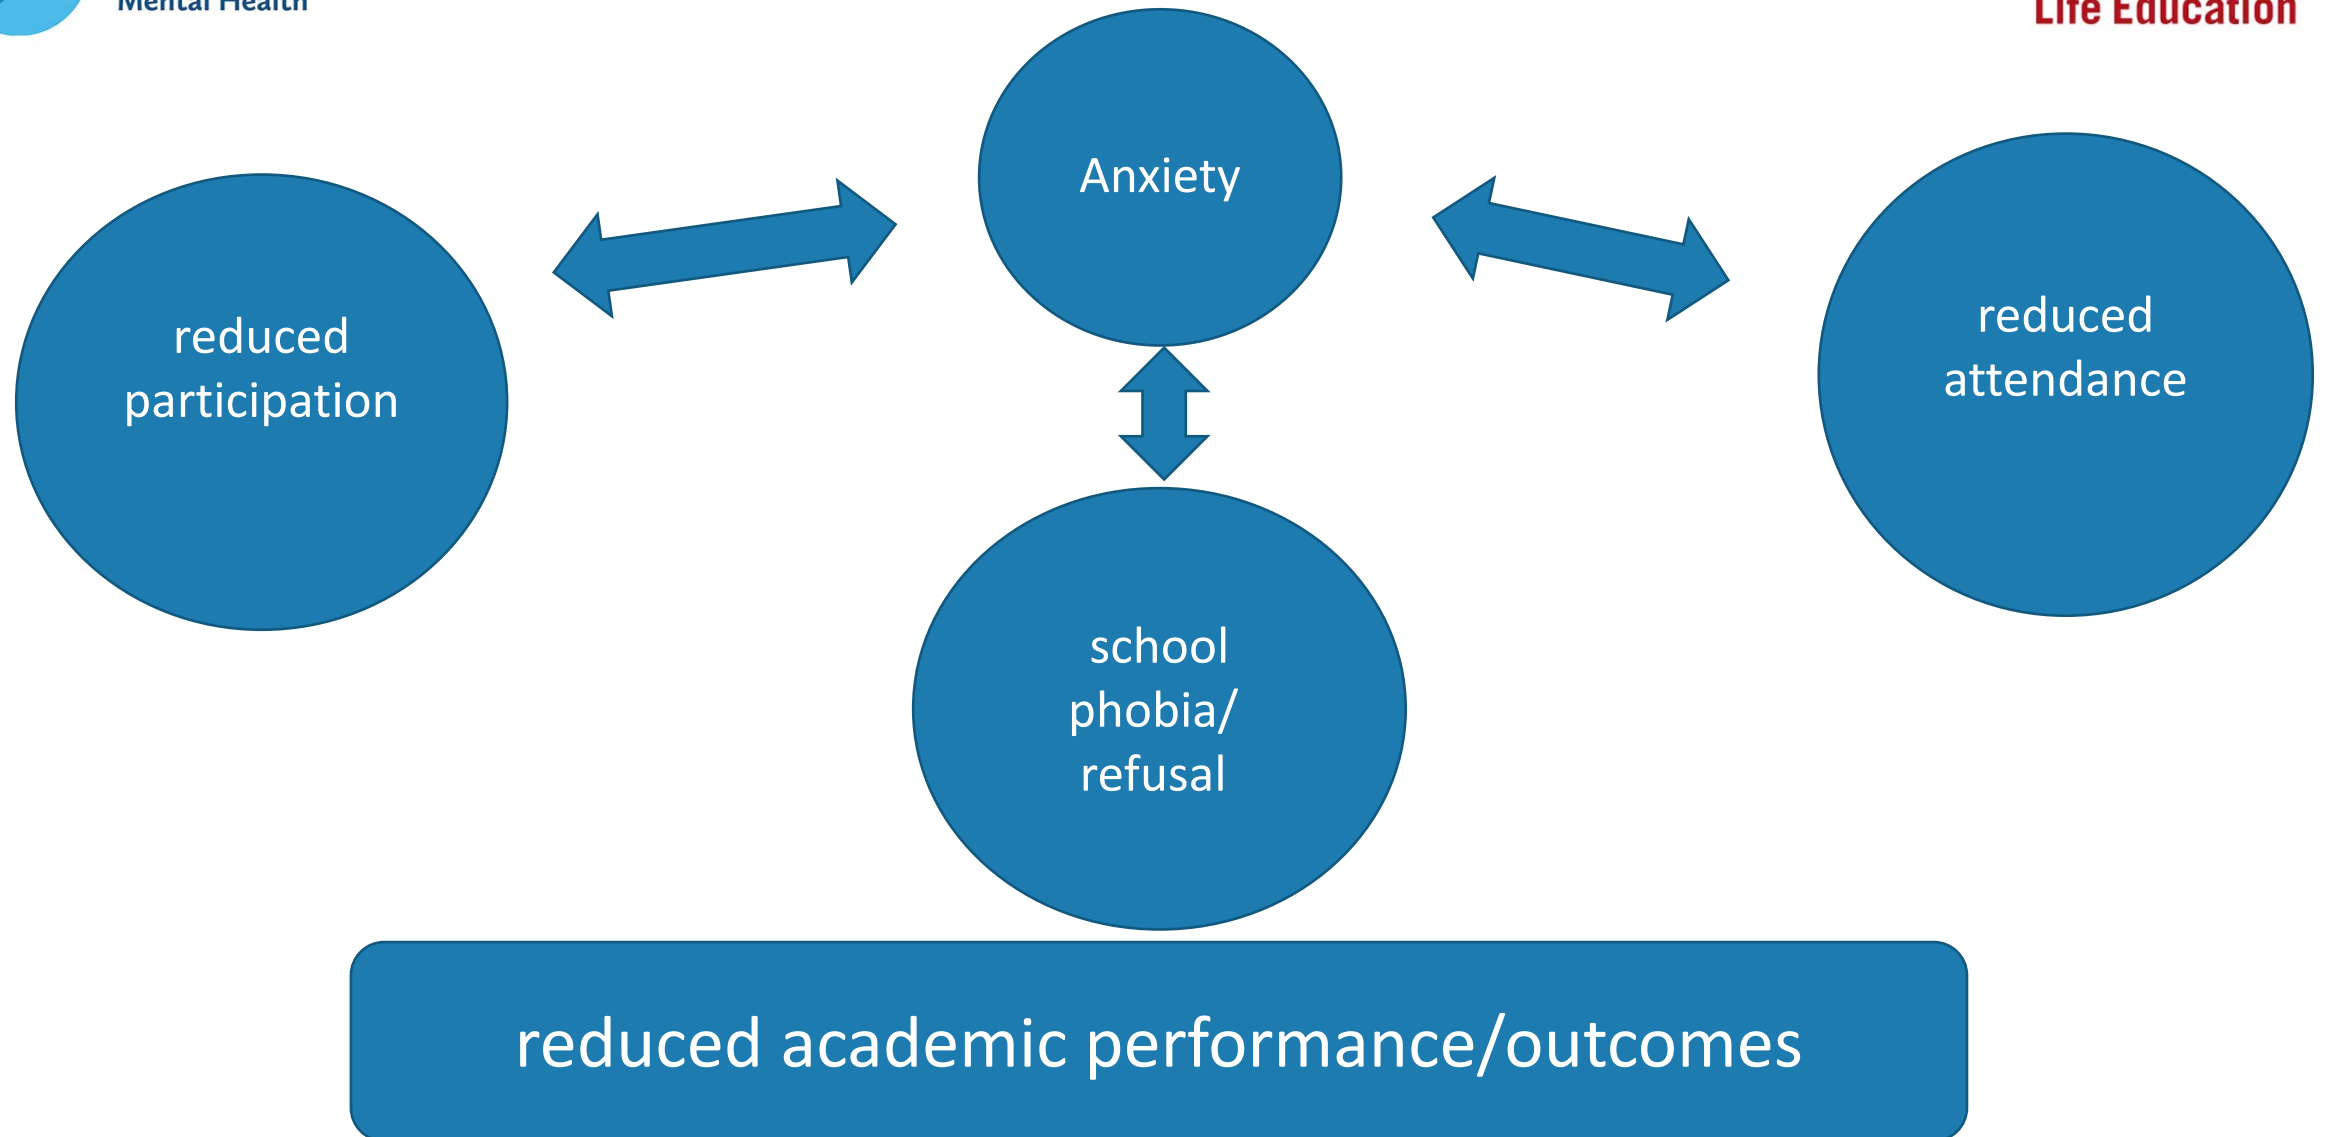

SOMETIMES children hold it together in school and the fallout happens when they go home

# Principles for supporting children and young people who have difficulties with anxiety

Schools are ideally placed to identify and support those at risk

- contact with children and families
- knowledge of children and developmental norms
- familiarity, proximity, non-clinical setting - reduced stigma

Education professionals are among the most consulted about emerging child mental health problems

Schools are already doing lots to help those with anxiety...

- PSHCE/RSE/ Social Wellbeing
- CBT (Cognitive Behaviour Therapy) , ELSA sessions, play therapy, counselling

Some studies provide support for school-based CBT interventions to reduce anxiety symptoms (mostly in primary schools)

**BUT...**

Targeted Interventions

only offered to  
some

miss  
lessons

short-term

timetabling can be hard

expensive

children may struggle to  
apply strategies

## CLASSROOM MANAGEMENT

teacher behaviour/  
teaching styles

behaviour

routines & rules

achievement

praise & feedback

anxiety

The Association  
for Child and Adolescent  
Mental Health

# Principles we can apply to the school setting based on successful treatments

**1. Think about how you/the child/the parents want  
things to be  
(not how you *don't* want them to be)**

What would s/he be doing  
that s/he isn't doing at  
the moment?

What changes  
would you notice?

What would he/she be  
doing differently?

## Problem: Coming into classroom

	Child	Parent	Teacher
What I want to achieve	<ul style="list-style-type: none"> <li>walk to classroom independently</li> <li>go into classroom quickly</li> <li>put my stuff away and start my work</li> </ul>	<ul style="list-style-type: none"> <li>be able to drop off quickly with no crying/resistance</li> <li>no delay in me leaving the school</li> <li>stop feeling awful/guilty</li> </ul>	<ul style="list-style-type: none"> <li>child coming in independently</li> <li>no need for me to be involved in encouraging to come in</li> <li>settling without resistance and starting task set</li> </ul>

## **2. Think about what the child needs to learn**

**- Be curious and be brave!**

# Ask questions

- Why are you feeling worried?
- What is frightening you?
- What do you think will happen if you ...?
- What is the worst thing that might happen?
- What is it about (this situation) that is making you feel worried/frightened?

## Empathise

- Show you can see how that must make them feel
- Label emotions

## ‘Normalise’

- Show this is a normal reaction

GOAL	WHAT IS THE CHILD THINKING?	WHAT DOES THE CHILD NEED TO LEARN?
To regularly ask questions in class	I will get told off if I get something wrong. The teacher will shout and get cross.	What will really happen if I ask a question? What will really happen if I get something wrong? What will the teacher do? How will I cope?
To be in school everyday	My mum will get hurt if I'm not at home, and won't be there to pick me up	What happens to Mum when I am at school? What would happen if Mum couldn't pick me up? How will I cope?

**3. Put it to the test!**  
**(You probably need to do it gradually)**

## 4. When problems come along, build confidence in solving them

## School staff can make a difference

Key tools that you bring:

you know your  
children well

you are  
experienced  
communicators

you are used  
to being  
unfazed and  
calm in a crisis

## Supporting children and young people with worries about COVID-19

### Advice for parents, carers and people that work with children and young people

NIHR | Oxford Health Biomedical Research Centre

NIHR | Applied Research Collaboration Oxford and Thames Valley

This is a time of uncertainty and a lot of children and young people will be feeling anxious and worried about what is going on. This is a normal response to the situation and below we offer some advice about what adults can do to help and support children and young people.

There is a lot of information becoming available - this is great but may also be confusing, so we have pulled together some advice and some of our favourite links in to one place. We hope this will be helpful.

Given that the situation is changing rapidly at the moment we will make updates from time to time which you will be able to find here: <https://emergingminds.org.uk/resources/>
